AUROVILLE ECO-SERVICE ERP

AI Prompts Guide & User Manual — Cooperative Open Source Prototype

Initiative Sponsor / Developer: Dmitry Lab

Target Audience: Managers, Hub Sorters, Field Collectors & Residents

Document Type: Operational AI Consultation Guide

Source Reference: `PROMPTS_GUIDE.TXT` (10 Thematic Prompts)

1. Overview & Management Controls

Operational workflow for extracting architecture details, business logic, and deployment roadmaps from the ERP knowledge base.

Purpose & Participant Roles

This guide serves as an operational tool to extract technical architecture details, business logic clarifications, and deployment roadmaps from the ERP Prototype knowledge base.

Any project participant (**Manager**, **Hub Sorter**, **Field Collector**, or **Resident**) can use these pre-formatted prompts to consult the AI Guide on the system's core design patterns, database structures, and scaling principles.

Step-by-Step Execution

1. Upload the system documentation files (e.g., the open-source transfer proposal and the UX/UI system architecture overview) into your AI chat interface.
2. Copy and send any of the 10 thematic prompts below to analyze or expand upon the current state of development.

2. Technical Controls & Comprehensive AI Prompts

Ten pre-formatted prompts organized across three functional domains to inspect established system logic and guide future specifications.

DOMAIN A: ARCHITECTURE, LEDGER INTEGRITY & RBAC SECURITY

Core database schema isolation, material accounting flows, role-based permissions, and append-only Event Sourcing.

PROMPT 1 — SYSTEM ARCHITECTURE & DATABASE SCHEMAS

```
"Explain the overall architecture and goals of the 'Auroville Eco-Service' ERP system, as well as the role of the four isolated database schemas (dicts, infrastructure, security, analytics)."
```

PROMPT 2 — MATERIAL ACCOUNTING & EVENT LEDGER

```
"How is the material accounting of waste structured in the system? Tell me about the connection between the bags tables, the bag_events event log, and the accounting storefront."
```

PROMPT 4 — FOUR-LEVEL RBAC SECURITY MODEL

```
"Describe the four-level Role-Based Access Control (RBAC) model in the system: from residents and field collectors to managers and the CEO."
```

PROMPT 9 — EVENT SOURCING & APPEND-ONLY RELIABILITY

```
"How does Event Sourcing work, and why is capturing data through an append-only event log more reliable than classic state tables?"
```

DOMAIN B: ADOPTION LEVELS, ECONOMICS & SIMULATION

Pilot facility selection, stream simulation mechanics, progressive physical labeling, and CAPEX/OPEX modeling.

PROMPT 3 — 2-MONTH PILOT LOGIC & STREAM SIMULATOR

```
"What is the logic behind the 2-month pilot project for 10 key facilities (restaurants, offices, factories, guesthouses), and how does the stream simulator work?"
```

PROMPT 5 — PROGRESSIVE FIELD WASTE LABELING OPTIONS

```
"What are the options for field waste labeling (from laminated tags to QR codes and smart containers), and how are they selected based on complexity levels?"
```

PROMPT 6 — ECONOMIC MODEL (CAPEX/OPEX) & TECHNICAL SUPPORT

```
"How is the project's economic model (CAPEX and OPEX) structured, and what are the benefits of Dmitry Lab taking on development and technical support?"
```

DOMAIN C: FIELD HARDWARE, ROADMAPS & COMMUNITY ENGAGEMENT

Note: These prompts act as triggers to detail and expand future operational requirements.

PROMPT 7 — OPERATOR SMARTPHONE & SCANNING SPECIFICATIONS

```
"What are the technical requirements for operators' smartphones to scan tags (minimum OS version, camera specifications, and wireless interface support)?"
```

PROMPT 8 — PILOT ROLLOUT & AUROVILLE-WIDE SCALING PLAN

```
"What is the implementation plan for the pilot rollout: from the preparatory phase to evaluating results and scaling across the entirety of Auroville?"
```

PROMPT 10 — POST-PILOT PROSPECTS & COMMUNITY ENGAGEMENT

```
"What are the development prospects for the eco-service after the pilot is completed, and how can resident engagement within the community be ensured using the 'from simple to complex' principle?"
```
